

VPN Remote Access for Windows

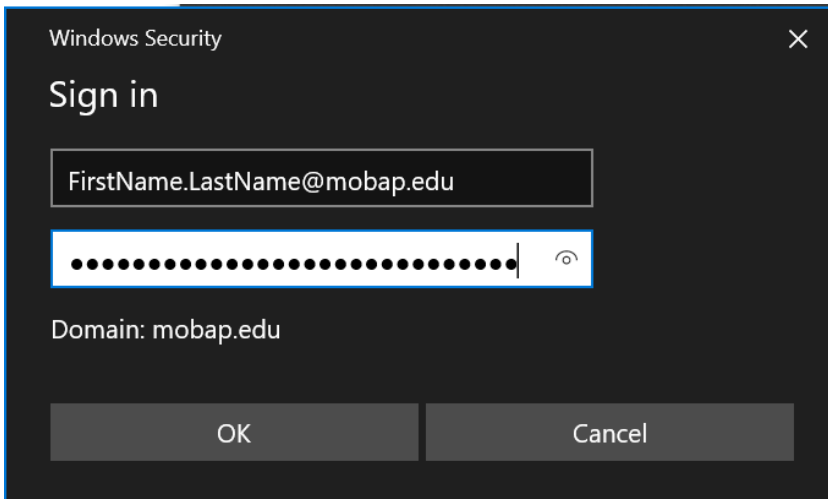

You can connect to the University's Virtual Private Network (VPN) to access internal resources on a University-managed Windows device while away from the office.

⚠ If your MBU-managed device does not have the MBU VPN Connection option, please submit a helpdesk ticket to helpdesk@mobap.edu or call 314-392-2377 during business hours. These instructions will not work unless these settings have been deployed to your device.

1. In the bottom right of your screen, click the Network & Internet Settings icon, which should look like a WiFi signal (if you're connected wirelessly) or a monitor (if you have a wired connection). When the menu opens, click **MBU VPN Connection**.

2. When prompted, enter your MBU email address and password.

3. After your credentials are verified, you will see a successful connection to the MBU VPN.
